

# Error code 30145 when installing Office

OneNote 2016, Office 2016, Excel 2016, Word 2016, Outlook 2016, More...

If you get an error that contains 30145 when you try to install Office, here are some things you can try to fix the problem. We've listed the most common solutions first, so try them in order.

## 1 - Restart your device and try installing Office again

In your browser, bookmark this article so you can easily return to it since you'll have to restart the computer you're trying to install Office on.

1. Save your work and close any programs you have open, and then restart your computer.
2. Once your computer restarts, open a web browser such as Internet Explorer, and sign in with the account associated with Office, and then select **Install**.

## 2 - Repair your Office app from the Control Panel

The steps to access the repair tool vary depending on your operating system. Choose your operating system from the options below.

Windows 10	▼
Windows 8 and 8.1	▼
Windows 7 or Vista	▼

## 3 - Uninstall and reinstall Office

1. Click this easy fix button to uninstall Office.

2. For the remaining steps showing how to save and use the easy fix, select your browser from the drop-down list below:

 ▼

## 4 - Manually remove Office

- If the easy fix tool from the previous step doesn't completely uninstall Office from your device, try [removing Office manually](#).
